

Collaboration with Belina Pharma concludes

A collaboration agreement with Belina was signed in 2017 with the aim of using LIDDS depot technology in combination with a drug intended for the treatment of breast cancer. The collaboration has now concluded.

LIDDS has delivered the drug formulations with release profiles in line with Belina's requests. Due to increased requirements for the drug's dosing level, Belina has chosen not to continue with the collaboration.

-We have fulfilled our obligations and LIDDS has had full cost coverage for the collaboration. The collaboration has concluded as the dosing levels required have been adjusted and increased during the project, says Monica Wallter, CEO LIDDS.
